Application for DevOps / Platform Engineer

Dear Hiring Manager,

I am applying for the DevOps / Platform Engineer position at Company Name. Alongside my current QA leadership role, I have hands-on experience building CI/CD infrastructure, improving developer workflows, and supporting delivery platforms in environments that require reliability, visibility, and collaboration across teams.

In consulting work for Polestar and Volvo Cars, I worked on CI/CD workflows, Azure DevOps and GitHub-based delivery pipelines, containerization, Kubernetes-based deployment workflows, and engineering enablement. I also built Grafana-based release visibility and logging solutions that helped teams understand delivery status across services. Across roles, I have worked with GitHub Actions, Azure DevOps, Docker, Kubernetes, AWS, Azure, Ansible, Grafana, and Datadog.

What I bring is a pragmatic platform mindset: reduce friction for engineers, improve release confidence, automate repeated work, and make systems observable enough to support fast, informed decisions. Because I also come from QA and product-facing roles, I tend to design platform solutions that serve both engineering efficiency and software quality.

I would welcome the opportunity to contribute that blend of platform engineering, automation, and operational clarity at Company Name.

Sincerely,

Wojciech Bajer
